GenAI Agents
DON'T NEED
COFFEE
Like I DO
(Yet)

~~~~~  
Coffee, play and living,

Timothi Lim

For the UKRI AHRC EDI-AI

"The agent sounded like me."

At Keisha Thompson's  
Probabilistic Poetry

Workshop, Two AI

Models described me

"Curious / Experimental /  
Resilient / Builder" —

But neither mentioned

**COFFEE**

Yet I still felt  
recognised

2

GenAI gives me extra capacity to "do" but I am less comfortable with how managerial the process is -

---

Once I used to sip coffee while coding

Now, I can finish a whole cup while the agents "work"

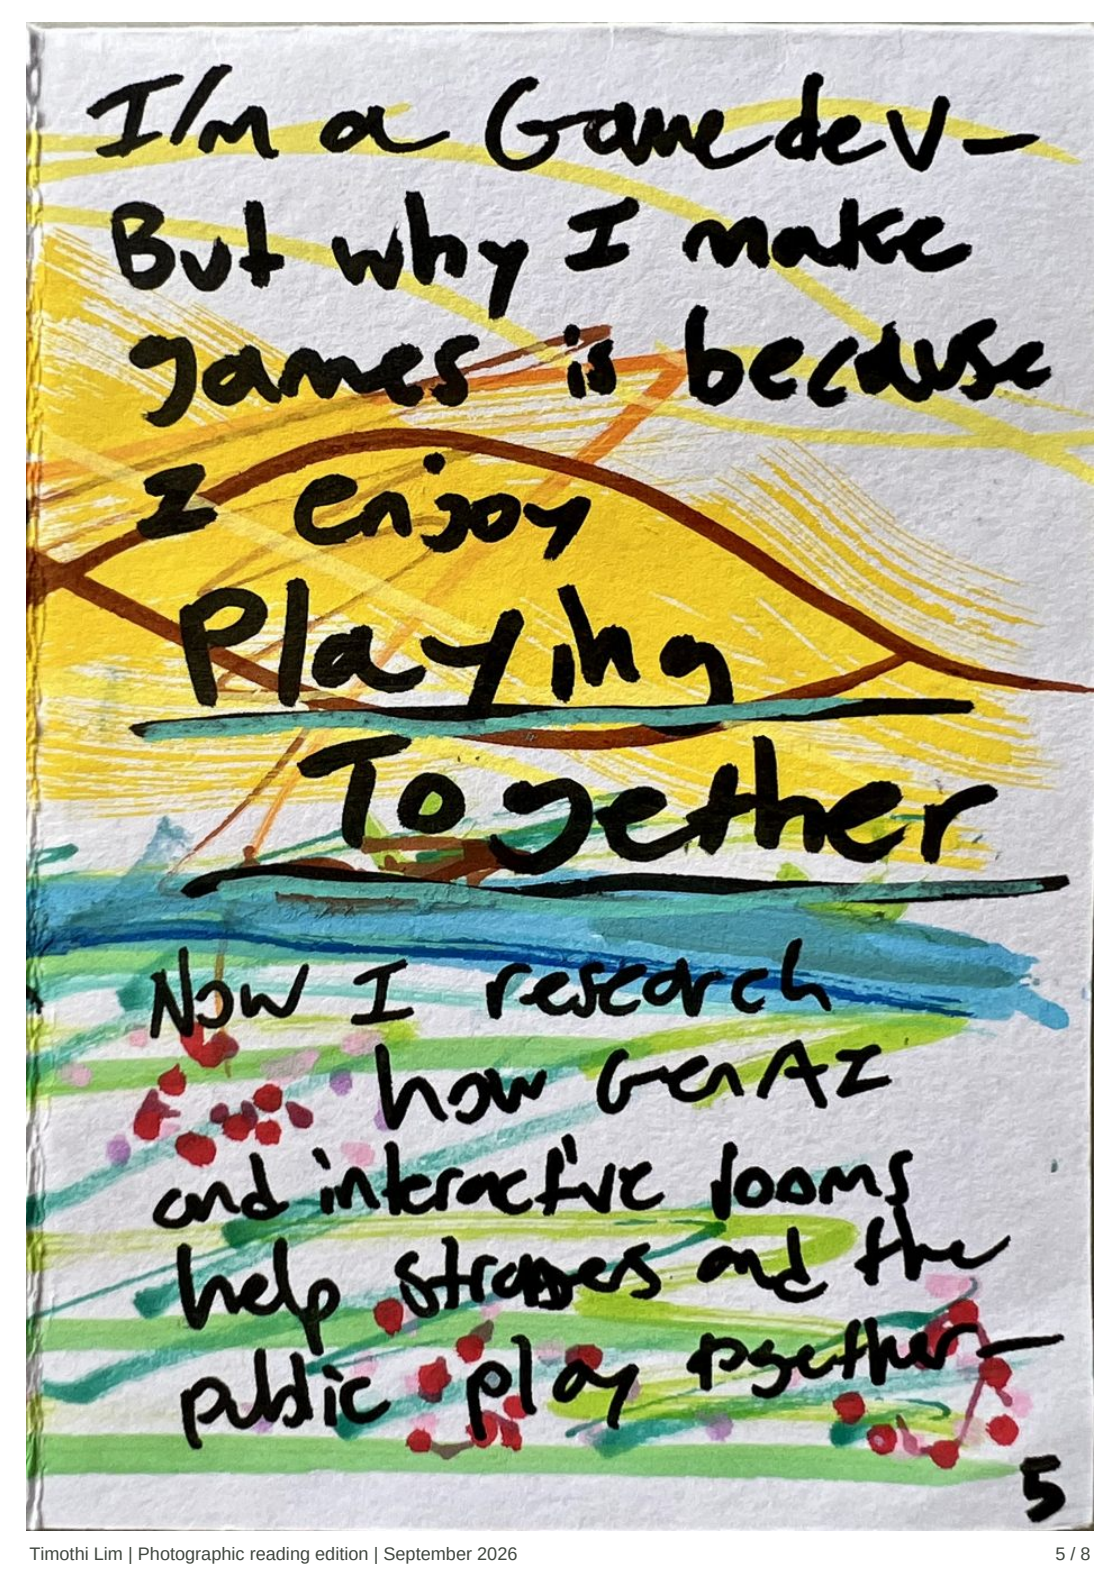

3

BUT I don't create  
alone! sure, the code  
may be done at home,  
but the real creating  
is done with others—

EVEN coffee comes  
from the work of  
others!

AI has lots of hidden  
labor that isn't  
visible.

4 My "system of self"  
is not just  
me!

I'm a Game dev -  
But why I make  
Games is because  
I enjoy  
Playing  
Together

Now I research  
how Gen A Z  
and interactive tools  
help strangers and the  
public play together

Matt Hayler's  
Workshop on Neurodiversity  
made me question  
who has to adapt:  
the system? other  
people? ~~ourselves?~~

Q What does GenAI  
ask/force us to adapt  
to?

Yet GenAI is Probabilistic  
So how do we trust?

Jack Wilson's  
Session helped  
me think of the  
HUMAN DECISIONS  
behind the machine  
.....

Q. Can you TRUST  
those decisions?

7

I am still a developer  
without coffee

I am still a developer  
without Golang

As long as I can  
Imagine, I can play  
and I can make!

Coffee + Golang  
= MORE

But what is

MORE??
